

Description

The P1405 over-voltage protection device features an ultra-low 30mΩ (typical) on-resistance high current integrated N-MOSFET which actively protects low-voltage systems from voltage supply faults up to +30VDC. An input voltage exceeding the over-voltage threshold will cause the internal MOSFET to turn off, preventing excessive voltage from damaging downstream devices. P1405 has thermal protection at 140°C

The P1405 is available in a RoHS and Green compliant DFN2x2-6L package.

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.

Recommended Operating Conditions

Parameter	Symbol	Value	Units
VBUS input voltage range	V_{BUS}	3.0 to 30, typical=5	V
Operating ambient temperature	T_A	-40 to 85	°C
Thermal Resistance	$R_{\theta JA}$	67.5	°C/W

Note 2: Junction to Ambient thermal resistance is highly dependent on PCB layout. Values are based on thermal properties of the device when soldered to an EV board.
